

## Our Doctors

Dr. J. David Kriet and Dr. Clinton D. Humphrey make up the Division of Facial Plastic and Reconstructive Surgery in the nationally recognized Department of Otolaryngology Head and Neck Surgery at the University of Kansas Medical Center. They are experts in cosmetic and reconstructive facial plastic surgery within the greater Kansas City area and beyond. Drs. Kriet and Humphrey are active not only as busy surgeons but are also sought out as authorities and lecturers in their field, constantly working to pioneer new procedures and educate others. They are passionate researchers and have authored numerous scholarly articles in their efforts to improve other surgeons' surgical results and develop cutting edge techniques. Additionally, they frequently serve as editors for leading academic journals, keeping them abreast of fresh ideas that may improve their patients' results.

**We look forward  
to serving you**

## Our Aesthetician

Jennifer Ambrosio is the aesthetician at KU Facial Plastic and Reconstructive Surgery at KU MedWest. Jennifer holds aesthetics licenses in both Kansas and Missouri. She graduated from the aesthetics program at JCCC where she also completed the Aesthetics Instructor's Training program. Jennifer believes continuing education is the key to successful aesthetic results. In the ever changing world of beauty, it is important to separate trends from science. She is laser trained with Sciton, and has completed advanced laser workshops. She is certified with SkinPen, Latisse, Image, and Obagi and volunteers for the organizations Look Good Feel Better and hospice.

Jennifer specializes in skin rejuvenation and correction. After an in depth consultation that includes skin typing and photos; a treatment plan is developed.

Photofacials, chemical peels and microneedling are office favorites. The use of Obagi skin care at home; enhances and protects procedures performed in the office.

# Explanation of Services

## CONSULTATION

A consultation with our aesthetician begins with an in depth skin analysis. Our Reveal photo imaging system uncovers pore size, depth of wrinkles, spider veins, skin inflammation, and UV sun damage. We have the ability to view different skin features, along with dimensional close ups of selected facial areas. This camera helps the aesthetician facilitate a treatment plan for your unique skin condition and goals. By comparing current and previous sessions we can track the progress of your treatment plan, and make adjustments where needed.

## FACIAL

The customized facial starts with a skin analysis. No two people have the same skin. Your face is unique, and so is your facial. Patients experience a cleansing massage with steam, exfoliation, and aromatherapy. If needed, extractions are performed. Serums and masks are then customized for each individual person. A facial stimulates blood flow and lymphatic drainage, and it's a great way to maintain healthy glowing skin on a monthly basis.

## CHEMICAL PEEL

As we age our skin cells slow down, leaving the skin looking tired and dull. Our chemical peel is a light superficial peel that accelerates skin cell turnover with no downtime. It immediately leaves the skin brighter and tighter looking. Depending on skin condition a series of peels may be recommended. A peel helps combat the early signs of aging, speeds the delivery of other topical treatments, and complements facelifts.

## BBL PHOTOFACIAL

For patients seeking a more even complexion, a BBL Photofacial will yield the best results. Patients with heavy solar damage will see improvement after one treatment. BBL is also appropriate for treating Rosacea. This treatment can be performed alone, or in combination with a MicroLaserPeel. This is a KUMedWest favorite and is also suitable for necks, chests, arms, and hands.

## SKINPEN/MICRONEEDLING

Microneedling stimulates the skin's natural ability to produce new collagen and elastin for healthier, younger looking skin. This new production can reverse years of sun damage, improve acne scars, and enhance the overall appearance of aging skin. The procedure typically takes 15-30 minutes, depending upon the severity of skin damage. Total healing time depends on the depth of treatment. On average, patients are pink for 2-4 days. Some patients heal completely in 24 hours. Dermal collagen remodeling takes place over time, and continues to improve up to six months after treatment. For the treatment of acne scarring; 3-5 treatments are recommended.

## MICROLASERPEEL

If skin resurfacing is your concern, our MicroLaserPeel is the solution. Our laser peel addresses fine lines, wrinkles, and pore size. If hyperpigmentation is also a concern MicroLaserPeel can be performed in combination with BBL. Skin appears smoother, brighter and tighter within 1 week. This treatment is a great complement to Botox and fillers. Depending on depth, the patient will look and feel sunburned for an average of 3 days. For best results it should be performed 2 weeks before fillers and botox. This is a great treatment prior to a special event, or yearly to maintain a more youthful appearance.

## LASER HAIR REDUCTION

Do you waste too much time shaving? Are you embarrassed by unwanted facial or body hair? Laser Hair Reduction reduces unwanted hair production by 60-90%. This treatment is suitable for dark hair on the face or body. It does not work on grey hair or peach fuzz. The area to be treated should be shaved 24 hours before treatment. Typically 5-8 treatments scheduled 4-6 weeks apart yields the best results.

## BOTOX, FILLERS, AND KYBELLA

See the transformation Botox, fillers, and Kybella can provide with minimal downtime. All injections performed by our board certified facial plastic surgeons.
